Subject: Health Canada Submission

Per Roger, attached please find an excerpt from the Health Canada Submission. There are some suggestions from him for the attached. Regarding sections 6.1 and 6.2, it seems that these could be incorporated into the rationale for the 90-day rat inhalation test. Section 6.3 is useful and could be incorporated into the opening chapter of the Non-human testing document under the heading harm reduction. anays

In order to go forward with the suggestions, Roger will need two things from you, first, please check with the authors of the sections below and see if they agree with us using the document for the purposes above. Second, please find out whether what we have is the most current copy of the document or whether or information needs to be updated.

Please let me know if you have any further questions.

Thanks
Patrice
